

GSMA eSIM Security

ENISA Article13a - Stockholm

06 March 2019

THE GSMA
WAS FOUNDED
IN
1987

12 OFFICES WORLDWIDE:

LONDON

DUBAI

ATLANTA

BRUSSELS

BARCELONA

HONG KONG

BRASILIA

BUENOS AIRES

SAO PAULO

NAIROBI

NEW DELHI

SHANGHAI

The GSMA
represents
the interests
of mobile
operators
worldwide

UNITING
NEARLY
800
MOBILE
OPERATORS

WITH
300+
COMPANIES
in the broader mobile ecosystem

The world's leading mobile industry events,
Mobile World Congress and Mobile World
Congress Shanghai, together attract

130,000+
people from across the globe each year

The GSMA works to deliver a regulatory environment
that creates value for consumers by engaging
regularly with:

MINISTRIES
OF TELECOMS

TELECOMS
REGULATORY
AUTHORITIES

INTERNATIONAL &
NON-GOVERNMENTAL
ORGANISATIONS

CONNECTING
27,000+
Industry Experts

Exclusively for GSMA Members,
InfoCentre² is your place to
connect with a global
community of industry experts

GSMA Working Groups
provide frameworks and
standards in commercial,
operational and
technical matters that help
maintain and advance
mobile industry ecosystems

**7.5
BILLION+**

MOBILE CONNECTIONS
WORLDWIDE

Agenda

- eSIM, how it changes UICC management
- eSIM threats
- eSIM current security controls
- GSMA concerns regarding eSIM security controls
- Next steps

eSIM changes the way the industry purchases and uses SIMs

Physical SIM

1. Operators specify and purchase SIM cards. Security features and assurance are managed by operators

Operator

SIM Card

SIM card

Deliver

Device

2. Operators use SIMs to identify and authenticate subscriptions

3. SIM data is used to securely identify and authenticate the subscriber

Authenticate and Authorise

1. A non-removable eUICC is specified and procured by the OEM and soldered directly into the device

Operator

eSIM

eSIM Profile

Download

IMEI

Device

EID

2. The profile, once downloaded, is securely stored on an eSIM, which is soldered into the device

4. The profile data on the eSIM is used to authenticate the subscriber, just as for the SIM card

3. An eSIM can store multiple profiles, meaning Devices that can connect to two networks simultaneously will have two IMEIs

Authenticate and Authorise

ICCID

IMSI

eSIM Threats

- Based on the eSIM architecture the threats of attack include:
 - Poisoned ecosystems and supply chains
 - eSIM profile tampering
 - IP based attacks on infrastructure
 - Phishing based on customer journey

SAS Update for eUICC production and profile download

- Understand emerging production models for eUICC & their risks & controls
- Agree & document principles on the types of activity that need SAS certification
- Ensure that all required activities & entities are SAS certified, based on agreed principles
- Advertise this to GSMA members & other stakeholders

SAS
Subgroup

GSMA

Remote SIM Provisioning (RSP)

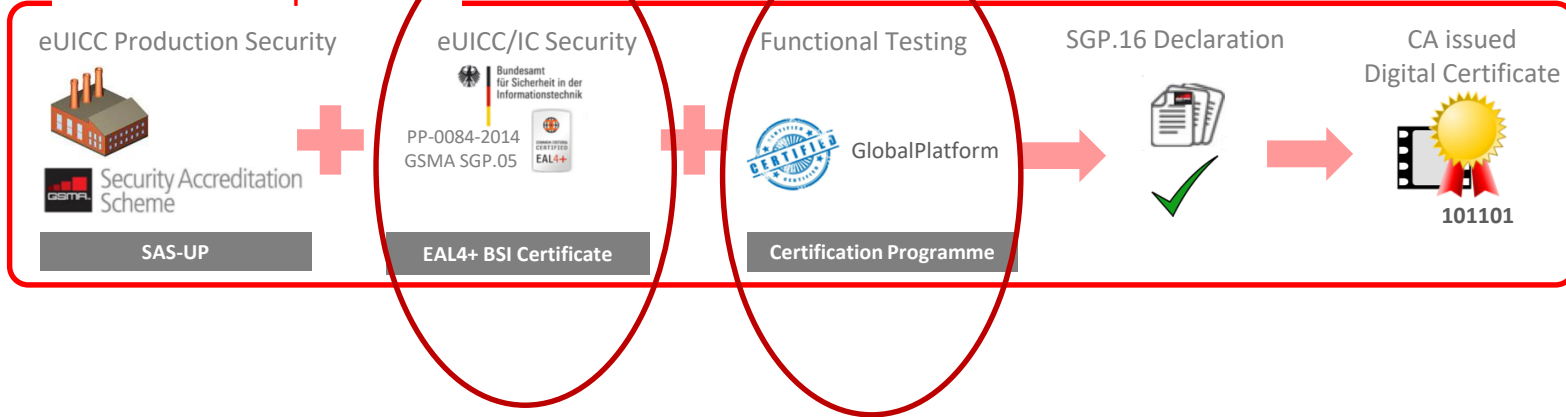

- eSIM provisioning is protected via PKI managed by the GSMA
- At the root of our chain are GSMA PKI certificate issuers
- These entities:
 - Are WebTrust accredited
 - Meet PKI Policies defined by the GSMA
 - Are known to, and in contact with, GSMA

SGP.05 (PP-0087) + IC
based PP-0084

SOG-IS lab and
Certification Body

Common Criteria
EAL4+ compliant

eUICC security assurance

- GSMA created two Common Criteria Protection Profiles (PP-0087 and PP-0100) to provide Security Assurance of the eSIM and M2M functionality
 - In addition to the generic IC based assurance of PP-0084.
- However, GSMA has been unable to get consensus on a timeline to activate a compliance requirement for either of the Common Criteria Protection Profiles.
 - No eSIMs to date have voluntarily certified security assurance referencing the embedded UICC protection profiles
- Common Criteria methodology reported as unfit for commercial eSIM

Next Steps

- Continued absence of Security Assurance for eSIMs is untenable.
- GSMA to extend its SAS scheme to cover eSIM security assurance; possibly as an industry run security assurance scheme under the Cybersecurity Framework
- This scheme should work to achieve a Risk owner based scheme managed by the GSMA, that
 - Addresses current security threats, is
 - Recognised by risk owners globally as a trusted marque for eSIM security assurance, and
 - Provides a fair approach for all stakeholders

Thank you for listening
